

# **PMP0325: Mini IT Projects**

## **Preliminary Report - Storyboard**

Project Title: FOODOLOGY CULINARY SCHOOL  
Trimester: 2120 Session: 2021/2022 ✓

Supervisor Name:  
Madam Robiatun Adawiah Binti Ahmad Kushairi

Group Member:

No	Name	Student ID
1	HAU WEI JIE	1201103533
2	HOW SHUE KEI	1201103432
3	SHARLENE TAN SUE WEI	1201102989
4	ONG WEN KAI	1201103297

 ✓

To be completed by Supervisor (Write the mark for each evaluation criteria):

A. Report Requirements – Planning Phase				
Criteria	Poor	Average	Good	Mark
	0 - 4	5 - 7	8 - 10	
Well-prepared & readable	Students follow a set of directions to prepare the report but did not explore new ways to alter the idea. The report was not well prepared and not readable.	Students' proposal is original but mostly based on an existing idea. The report was prepared adequately and readable.	Students explored and expressed many new ideas. The report was very well prepared and readable and has a perfect flow of ideas.	7
Operational feasibility	The proposed activities/ contents are not sufficient to complete the project and do not satisfy the project requirements identified in the analysis phase.	The proposed activities/ contents are just sufficient to complete the project and meet the project requirements identified in the analysis phase.	The proposed activities/ contents are more than sufficient and well organized to complete the project and exceed the project requirements identified in the analysis phase.	8
Technical feasibility	Students do not have sufficient technical requirements such as skill required in the development process, manpower, hardware, software, time and money to complete the project.	Students have very limited technical requirements such as skill required in the development process, manpower, hardware, software, time and money to complete the project.	Students have sufficient technical requirements such as skill required in the development process, manpower, hardware, software, time and money to complete the project.	8
Economic feasibility	The proposed project does not have any benefit and the cost required to complete the project is too much.	The proposed project has some benefits and the cost required to complete the project is just fine.	The proposed project derives many benefits and the cost required to complete the project is very little.	7
Schedule feasibility	The deadlines for each activity are not reasonable and the project cannot complete on time.	The deadlines for each activity are just reasonable and the project can complete on time.	The deadlines for each activity are reasonable and the project can complete on time and successfully in time manner.	8
SUBTOTAL				38/50

B. Report Requirements – Analysis and Design Phase				
Criteria	Poor	Average	Good	Mark
	0 - 4	5 - 7	8 - 10	
Required Element (Screen design, interfaces description and programming)	One or more required elements was missing from the storyboard.	The storyboard only includes the basic elements of multimedia.	The storyboard includes all required elements with additional information (text, graphic, audio, video and animation).	8
Clarity and neatness	The storyboard is hard to read where the elements are missing and labelled wrongly.	The storyboard is quite hard to read with elements are not placed and labelled accordingly.	The storyboard is easy to read and all elements are written, labelled or drawn with clarity.	7
Organization	Information is scattered and not in proper order.	Information is organized but not entirely sequential or with clarity.	Information is clear and well organized in a clear, sequential order.	7
Completeness	The storyboard is poorly designed.	The storyboard is acceptable but a bit messy.	The storyboard is well designed and prepared.	7
Content	Content has no relevance to the title and there is no message.	Content has some relevance to the title and the message is not clear.	Content is relevant to the title and the message is clear.	8
SUBTOTAL				37/50

TOTAL	75/100
Normalized Mark (20%)	15%

Supervisor's Signature & Stamp

## **Chapter 1: Introduction**

Our group has discussed and decided to create a website of Online Class for Cooking which named “Foodology” for the subject, PMP0325. The website is about information of recipe of food, and we also provide online classes to make sure consumer learnt 100% how the food made. We have hired few professional chefs from all over the world to provide quality online class. This webpage includes introduction of recipe, fee of courses, and ways to contact chef. In this website, the users can give reviews and share their comment on the courses that is visible by all users. Therefore, the consumer can know official’s both official’s information and customer’ reviews.

## ***1.1 Objective***

The main objective of this project is to develop a website by applying IT knowledge that we have studied and also learn some new techniques about website or application development. After discussion, our group decided to develop a website about Online culinary school. The objective of developing this website are:

- To provide a suitable pace in learning cooking.
- To discuss problems faced during cooking and the solution to solve the problems.
- To create a healthier and balanced diet to everyone and reduce the disease such as diabetes among Malaysian.                      indentation
- To provide a website that can ease everyone to think about the menu for cooking.

## ***1.2 Problem Statement***

- In this pandemic situation, many people feel unsafe going to restaurants. Consumers who are working from home no longer stop for breakfast or coffee on their commute, nor do they frequent the lunch spots around their offices.
- Moreover, many people's income is affected (decreased). While cooking at home normally come at a lower cost and often create leftovers that can be stretched much further than restaurant meals.
- However, most of the recipe or cooking tutorial in the market only mention the ingredients and procedure in the recipes or tutorial videos. Most of the people facing problems while cooking especially the beginners but they hardly to get help from others.
- Nowadays, more and more people care on their health condition, and they try to get a balanced and healthier diet but most of the website provides a variety of recipe that a mix of healthy and less healthy recipes caused reader hard too differentiate it.

indentation

## **Chapter 2: Background and System Planning**

For the website's background that we've created, entitled Foodology , it will more help to provide a suitable pace in learning cooking. Therefore, more and more people can enjoy while learning cooking. Moreover, it can also use to discuss problems faced during cooking and the solution to solve the problems. In addition, it will also provide a website that can ease everyone to think about the menu for cooking. It will surely lighten the burden of the cookers in house especially mother.

## ***2.1 Scope/Domain***

The website is specially designed and developed for beginners who want to learn how to cook.

The website consists of six menus such as, Home, Online Classes, About us, Shared Gallery, Members and Contact us. Each page of website contains different functions and features. The functions included in our website are as follows:

- o The Home page contains some images of food to attract the users. Besides, the home page also contains some menus of website so that the users can access to the content they are interested faster and efficiently.
- o The Online Classes page lets members ease to join the online cooking classes they want.
- o The About us page consists of some information about this culinary school. Therefore, user can know the background of culinary school easily.
- o The Shared Gallery page allows members to share and exchange some cooking experiences. In this case, they can encourage and help each other easily.
- o The Members page lets members to see each other's information, so that they can get to know each other better.
- o The Contact us page consists of our physical culinary school's location and there is also a contact form for the users to give feedback on this online culinary school

indentation

## 2.2 Feasibility studies

Feasibility study is an analysis that considers all of the project's relevant factors. For our project, it is a study to evaluate the feasibility of the website. For developing a website, we should analyse the operation of the website, the technicalities which include hardware and software required, develop the costs and benefits analysis of the website, and plan a schedule that includes the tasks we have to complete, and the time needed to complete.

### Software requirements

Our website supports both .NET 3.5 and 4.0 and later. Supported browsers for desktop devices are Google Chrome (version 76 and above), Safari for Mac (version 12 and above), Microsoft Edge (version 79 and above) and Firefox (version 72 and above).

Our desktop requirements are as following:

	Minimum requirements	Recommended requirements
Operating System	Windows: Windows 8 Mac: Mac OS Sierra 10.12	Windows: Windows 10 Mac: Mac OS 10.14 (Mojave)
Processor	1.9 gigahertz (GHz)	3.3 gigahertz (GHz) and above
Memory	2GB	8GB and above
Internet connection	Required	
Network speed	1Mbps broadband network or data network	8Mbps broadband network or data network

**Table 2.1 Software requirement**

There are four areas in our feasibility study which are operational, technical, economic and schedule feasibility.

### **2.2.1 Operational feasibility**

After it has been developed, the operational feasibility is the one that will be used effectively. If users have difficulty with a new system, it will not produce the expected benefits. First of all, our food online classes website is operationally feasible because it is specially designed for everyone. This website is not just for Malaysians, but it is also open for all students from around the world. Our website provides timely, pertinent, accurate and useful information on food recipes , schedule and fees of online class. Next, our website is user-friendly since it allows users to swiftly and easily find the information they require. The website is also very easy to use, with buttons that link to each part, making it simple for people to navigate around it. Furthermore, this current website's information management is done manually. However, because the information of the food recipe is fixed will not result in scribbling of data and loss of validity. There may be some minor changes to the online classes fee and lecturer that we can make manually. As a result, the users of the website are able to operate it in an efficient manner.

### **2.2.2 Technical feasibility**

Technical feasibility analyses both hardware and software required to develop our website, reliability of technology and riskiness of project. Firstly, the hardware that we used is Windows OS. Windows OS is an operating system which is user-friendly and provides regular features updates. The software that we used is Google Chrome. Google Chrome is a web browser that helps us to access websites and web authoring tools such as Wix. Secondly, the technology that we used is reliable. For example, Wix is an online website builder which offers free and secure web hosting service. The maximum storage and bandwidth of our website are 500MB each. Currently, our website has sufficient capacity for future needs. However, 500MB of storage is not sufficient if we want to upgrade our website in the future by including more high-resolution images or videos. The problem of insufficient storage can be solved by upgrading to premium plans provided by Wix. Last but not least, Our project will be less risky based on several factors. For instance, each team member is equipped with required technical skills and familiar with hardware and software development environments. The technology used is easily obtainable and available. Hence, the duration of the project to be done is not affected. In conclusion, our project is technically feasible.

### **2.2.3 Economic feasibility**

The biggest pros of this website definitely will be the costs. The site can generate benefits at almost zero cost. The fundamental device that we require to develop the website is a computer which all our members already possess beforehand. Most of the website builders provide both free and premium plans, but it is quite impossible to fulfil our plan due to the limited features of the free plan provided by most of the website builders. Yet, it is lucky for us to find an option which is Wix. Wix provides a great extra and wider range of features without charging any subscription fees. To get the proper information of the culinary course, we are trying to gather all the information we got from online sources. As a result, we do not have to waste our time searching any physical culinary schools just to get the resources for the website. Overall, there will be no expenditure required to build the website throughout the entire process. As for the benefits, the culinary course can gain more visibility through our website and the results may enhance the value of our website as well.

### 2.2.4 Schedule feasibility

We have been given a total of 14 weeks to complete the entire project and the tasks which have been assigned. The table below has listed our tasks and the project timeline that consists of 14 weeks. In order to assure that we manage to complete all the tasks within the time frame provided, we have constructed a Gantt chart as shown below.

We are required to seek a supervisor and form a team in week 1 and submit our project proposal in week 2. Next, we begin to analyze the system and to design our website in week 3. We have to complete the process by the end of week 4. From week 5 onwards, the development and testing of our website are scheduled to be completed by the end of week 12. We planned to finish and submit the preliminary report and final report within week 7 and week 9 to 13 respectively. Finally, we are going to present our finalized project in week 14.
